

# Gateway

## The Ecology Prime™ Gateway

Where All User Engagement Comes Together

---

**T**he *Ecology Prime™ Gateway* is a revolutionary central processing platform that allows users to easily and seamlessly engage all EP functionalities. This includes all activities users may engage – from virtual touring, content streaming and research applications, to study sessions and classrooms, special and live events, account management and all related bookings and retail purchases.

When users engage specific functionalities requiring functional or transactional processing, the Gateway takes over to handle and execute the task. For example, if a user wants to visit a Destination, they click on the *Book Your Visit* link which takes them to the Gateway as if it is just another page on Ecology Prime™. The Gateway will enable the user to book their visit and log it to their account. All user accounts and transactions are managed by the Gateway.

---

The Gateway will seamlessly and securely manage processing for all Ecology Prime™ applications and functionalities. These include, but are not limited to:

-  **Booking Engine:** Central transactional booking of all touring and travel - virtual and terrestrial, as well as all related transactions.
  -  **Ecology Prime™ Passport and Account Management:** Allows users to set up their own personal accounts to access all functionalities from social communications, platform engagement functions and self-touring to tour event participation and travel bookings. A special Passport function is that it keeps a life-long log of the user's experiences and ecological footprint accompanied by their own notes.
  -  **Destinations Eco-Exploration:** Virtual touring of countries, regions and ecological attractions around the world. Includes travel booking accommodations and hospitality.
  -  **Ecology Prime™ Data Resources:** The world's vital statistics and facts. An innovative aid for research and study as well as personal curiosity.
  -  **Ecology Prime™ Personal App:** Mobile-based application providing immediate access to global data and local ecological information to enhance the user's Ecology Prime™ experience. Interfaces with the EP platform and all other functionalities.
- 

**The World's #1 Go-To Connection for All Things Ecology!**
